Dual Looper

Overview

PLAYHEAD SPEED

LINKED PLAYHEADS

LINK ALLOWS YOU TO SLAVE THE RIGHT DECK TO THE LEFT CONTROLS

INPUT & INPUT GAIN

OUTPUT & OUTPUT LEVEL

RECORD / PLAY / OVERDUB

NORMALISED SIGNAL PATH

LED'S
LIGHT ON TO INDICATE STALLED, HALF, ORIGINAL AND 2 x PLAYBACK SPEEDS (FORWARD AND REVERSE)

CAPACITIVE TOUCH PLATE USED TO CREATE WARBLE EFFECTS OR STALL THE PLAYHEAD

CAPACITIVE TOUCH PLATE SENSITIVITY TRIMMER

SELECT LOOP LENGTH

SELECT LOOP START POINT

CLOCK DIVISIONS

AUX INPUT AND OUTPUT SECTION

HOLD DOWN ERASE AND RECORD BUTTON FOR 'PUNCH IN RECORD' (DESTRUCTIVELY REPLACES AUDIO)

TAPE DECAY TIME (IN DECAY MODE)

DELAY TIME (IN DELAY MODE)

Auxiliary Input & Output Crossfaders

Auxiliary Audio Input

In addition to the left and right input/output sections, the Lúbadh also has auxiliary input and output crossfaders which allow additional audio to be sent to the input sections or monitored from the outputs. Voltage control allows for modulation up to audio rate.

Auxiliary Audio Output

Crossfader Curve

Monitoring Options

There are three options for input monitoring; **Monitoring On**, **Armed Monitoring** and **Monitoring Off**. You can toggle through these options by holding down buttons 1 and 2, then pressing button 3 for the left deck, this action is mirrored for the opposite deck.

Monitoring On - Record Button Solid White

Armed Monitoring - Record Button Pulsing White

Monitoring Off - Record Button Off

Monitoring On - When monitoring is on the throughput audio is always present at the output and summed with any recorded loops. **(DEFAULT)**.

Armed Monitoring - When armed monitoring is selected throughput audio is muted by default, pressing the record button 'arms' the deck and throughput audio is toggled on, pressing record again records a loop, pressing record to finish the recording disables throughput audio and only the recorded audio is heard. When armed the erase button will disarm the deck without erasing the loop.

Monitoring Off - When monitoring is off only the recorded material appears at the output.

Time Functions

There are three separate functions for the **Time** knob; **Clock Divisions**, **Tape Decay Time** and **Delay Time**. You can toggle through these functions by holding down button 1 and pressing button 2 for the left deck, this action is mirrored for the opposite deck.

Note: CLK triggers indicated in white.

 The current time function is indicated by the Amber LED next to the 'CLK OUT' jack.

Amber LED Off

Time knob sets the number of clock divisions per loop. These are displayed by the white 'CLK OUT' LED.

Amber LED Pulsing

Sets how long recordings take to wear out when being recorded over. Akin to tape ageing.

Amber LED Solid Lit

Delay mode uses analogue feedback, which is dependent upon monitoring of the normalised signal path.

Looping or One-Shot Modes

Toggle between looping/one-shot modes by holding button 1 and pressing button 2 for the left deck, this action is mirrored for the opposite deck.

Looping or One-Shot Record

In one shot-record, recording starts from current playback position, records one full loop (set by start position and length) and stops recording automatically. (Looping by **DEFAULT**).

Note: Idle record button is lit mixed amber/white when monitoring is on, pulsing mixed when armed monitoring is on and remains off when monitoring is off.

Looping or One-Shot Playback

When looping is disabled (i.e. one-shot mode) playback stops after each loop. Retrigger will prompt the recording to play once. (Looping by **DEFAULT**)

Note: The record button will blink white when loop playback is selected and blink mixed when one-shot playback is selected.

Save and Load

Save

To save a recording onto the Lúbadh hold down buttons 1 and 2, press button 3, this action is mirrored for the opposite deck.

Note: Recordings and settings are also autosaved between power cycles.

Load

To load a saved audio recording hold down button 1 and press button 2, this action is mirrored for the opposite deck.

Note: Any audio content and settings autosaved from previous session will be automatically loaded when powered on.

Capacitive Touch & Pre/Post Switches

Capacitive Touch Switch

The switch on the lower side of the rear pcb toggles the capacitive touch on /off.

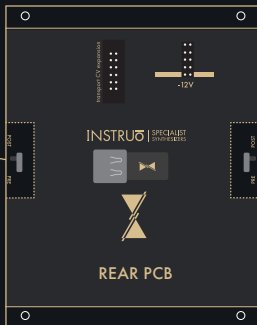

Capacitive Touch Switch

* See Overview Graphic

Pre/Post Output Level

Pre/Post switches on the rear of the pcb are used to toggle the output fader to being either pre or post output level.

CV Expander

Included with the Lúbadh is a CV expander, which is connected to the module via a ribbon cable. The expander allows for additional CV control over all remaining parameters.

Note: All CV inputs are bipolar (5V range).
